Calculator

Your assignment is to create a basic Console-based calculator. It should be able to handle basic mathematical operations (addition, subtraction, multiplication, division), and be able to present the results in a consistent way.

Required Features:

• The program should be able to perform basic mathematical operations (Math has methods for more advanced operations if you include them)
  o Addition, Subtraction, Division, Multiplication, etc...
• The program should keep running until the user chooses to end it.

Optional:

• Addition and Subtraction should be able to handle any number of parameters

Code Requirements:

• Each mathematical operation should be in its own method
• Use a loop and a menu system to keep the program running.
